

UPS as a Service from Volta

UPSaaS from Volta improves productivity, manages costs, and reduces risks.

Power infrastructure is the lifeblood of your business. Don't let UPS devices be the weak link. With UPSaaS from Volta, we own, monitor, and maintain them for you; a perfect fit for organizations with many remote sites or branch offices. Volta readies organizations to transform the overlooked task of UPS maintenance into an operational spend.

About Volta

Volta enables businesses to overcome their technology challenges by designing customized data center and cybersecurity solutions to meet the demands of a modern IT transformation.

Long-term business relationships are important to us. We earn our clients' trust through honest recommendations on the solutions best-suited for their business goals, and flexible support of their IT environments.

Take advantage of UPS devices in an OPEX model:

Owned

Volta's UPS as a Service Offering

"Volta's flexibility and true willingness to provide additional value assisted in building a cost efficient statewide solution for Kentucky schools."

-Volta UPSaaS Customer Reference

UPSaaS for your business.

IT is moving to an on-demand model that requires financial solutions as agile as the technology that supports them. Volta's UPSaaS can transform a critical infrastructure component from a capital purchase to an operational spend without compromise. You can have an as-a-service model while simultaneously improving your infrastructure and offloading what might have been an after-thought to professionals in the industry.

UPSaaS for your staff.

A well-maintained UPS uses several technologies to extend the life of the batteries, handle load changes, and manage power fluctuations. Rather than try and make your network engineer a UPS engineer, or your datacenter specialist a UPS specialist, let Volta's professional staff and years of experience handle your UPS environment and make sure it stays in optimal form.

UPSaaS for your business continuity strategy.

Losing power for as little as a quarter of a second can start a chain of events which may result in downtime of fifteen minutes to several hours or more. Power events like storms or facility failures can critically damage your UPS. With remote monitoring, replacement stock on hand, and proactive support, Volta can rapidly restore your infrastructure to 100% health.

Contact us today for your complimentary power continuity assessment.
